## SAUTER Declaration on materials and the environment

### Product

ASM115SAF232

ASM115SAF332

Type	ASM115SAF232, ASM115SAF332 <sup>1</sup>
Designation	Freely programmable damper actuator, Smart Actuator for ventilation dampers
Product range	Electric drives
Product group of eco-balance	Small valve actuators

### Manufacturer

Fr. Sauter AG  
Im Surinam 55, CH-4058 Basel

### Management system certified according to

## Energy requirement in the utilisation phase

Power requirement for component

Minimum power consumption 2,5 W

Average power consumption 5 W

Typical energy consumption per year 24 kWh

The energy requirement evaluation was performed for a typical utilisation scenario. The European electricity mix from ecoinvent 2.2 was used to evaluate the power consumption in the utilisation phase.

## Calculation of the environmental impact

Evaluation over the entire life stage of 8 years in a typical utilisation scenario. The results shown are based on a method of ecological scarcity that combines various environmental effects into an “environmental impact points” key figure. The method is based on Switzerland’s environmental targets and evaluates the individual effects depending on the “Distance to Target”.

Indikator	unit	production	device usage	disposal	Total
Global warming potential (GWP), IPCC 2007, 100a	kg CO2 eq.	11,9	185,7	0,3	198,0
Cumulative energy demand (non-renewable resources)	MJ eq.	217	3.762	0,8	3.980
Cumulative energy demand, renewable resources	MJ eq.	18,9	285,2	0,01	304,1
Acidification potential, CML 2001	kg SO2 eq.	2,13E-01	7,66E-01	2,01E-04	9,79E-01

Ecological scarcity 2006: Total	UBP	35.060	189.500	530	225.100

The relationship of the contributions made by the utilisation in comparison to those made by the reduction and disposal depends on the intensity of the utilisation (utilisation scenario).

**Product:**

The device must be disposed of as waste from electrical and electronic equipment (electrical/electronic scrap) and must not be disposed of as household waste. This applies in particular to the assembled PCB.

Special treatment for special components may be compulsory by law or may make ecological sense.

**WEEE (Waste Electrical and Electronic Equipment)**

The local and currently valid laws (WEEE2012/19/EU) must be observed.

**Packaging:**

Recyclable. Any packaging disposal fees are the responsibility of the importer.

**Special notes on hazards:**

Residual electrical charge possible in capacitive components.

<b>How the environment benefits</b>	With these products, we make a significant contribution to energy savings in buildings and to reducing climate change. Its resource-saving compact design and easy single-sort disassembly result in optimal sustainability with a life expectancy of 8 years. The eco-balance becomes even more optimal, with the use of energy from renewable sources.
<b>Extent of applicability</b>	This declaration is an environmental declaration based on ISO 14025 and describes the environmental impact of the product over its entire life stage. The declaration is made in a compact form without an external check or registration. The data gathered with existing data inventories for production processes has been evaluated from the ecoinvent 2.2 European database. For the determination of the energy requirement during the utilisation phase of the product, standard HVAC applications and average climatic conditions in Switzerland were assumed, based on the ecological accounting for the corresponding product group.
